1 Managerial and Technological Innovations: Any Relationship?

Hamidj, S and Benabdeljilil, N

3rd International Conference on Leadership, Technology and Innovation Management
2015 | Proceedings of the 3rd International Conference on Leadership, Technology and Innovation Management 181, pp.286-292

The crucial role of innovation is considered a major factor in creating value and enhancing business performance. However, the analysis of innovation has long been limited to technological innovation and few studies have been devoted to other forms of innovation including managerial innovation. The objective of this work is to verify the existence of a link between managerial innovation a

Abstract
Based on the provincial data of China's high-tech industries from 2009 to 2019, this paper constructs a stepwise regression to analyze the effect of innovation inputs, independent and secondary innovation, and innovation value, while being mediated and moderated by innovation ability and innovation network, respectively. We found that in general, innovation inputs had a significant positive direct effect on innovation valuation: a one unit increase of independent innovation increased 0.60 units of innovation valuation, and a one unit increase of secondary innovation input increased 0.78 units of innovation valuation. Innovation ability was found to be a partial mediator for independent innovation (0.74), and a complete mediator for secondary innovation (0.90). Finally, the innovation network showed significant moderating effects in both innovation input methods. Empirical research indicates that China is entering an era shifting from secondary innovation to independent innovation, and Chinese high-tech companies should focus on independent innovation.

Abstract

SciVal Topics

Metrics

Abstract

What does it mean to innovate? What skills are needed? What thought processes are involved? Answers to these questions can be found in the real-life stories of Agents of Innovation. Louis Jacques Filion and chapter co-authors Rico J. Baldegger, Candido Borges, Fernando Dolabela, Joëlle Hafsi and Francine Richer, present six fascinating case histories of three different types of agents of innovation: entrepreneurs, who create new products or services, facilitators, or process innovators, who help entrepreneurs to develop their enterprises, and intrapreneurs, who innovate within the organizations that employ them. In the second part of Agents of Innovation, a set of exercises guide readers as they develop their own innovative thinking process. Valuable to researchers, students, and those about to branch out into the world of business, Agents of Innovation informs many different disciplines, and in particular strategy - the sister discipline of entrepreneurship as far as the implementation of innovation is concerned. © 2024 Louis Jacques Filion. ABSTRACT

Social Innovation: Comparative Perspectives investigates socio-economic impact. Since it is hard to establish causality and to measure social properties when investigating impact, especially at the level of society, the book narrows down impact to one priority aspect: social innovation – understood as organizations' capacity to generate novel ideas, ways and means of doing things, of addressing public and social problems of many

Abstract

It is time for a major overhaul of higher education. Europe's first university was established in Bologna in 1088. Its curriculum was rather narrow, largely devoted to the study of law. Since that time, universities have developed in an attempt to keep pace with our changing society. How have today's knowledge institutes responded to the increasing pace of technological progress? How do they rise to new societal challenges? Why are they pursuing innovation in education – and how are they doing so?

Original language	English
Place of Publication	Tilburg
Publisher	Tilburg University
